Image processing and data analysis The multiscale approach

A wavelet is a wave-like oscillation with an amplitude that begins at zero, increases, and then decreases back to zero. It can typically be visualized as a "brief oscillation" like one recorded by a seismograph or heart monitor.

The dual-tree complex wavelet transform (DTCWT) is a relatively recent enhancement to the discrete wavelet transform (DWT), with important additional properties: It is nearly shift invariant and directionally selective in two and higher dimensions.

Introduction. This was the first web page I wrote on Wavelets. From this seed grew other web pages which discuss a variety of wavelet related topics.

Applying the Haar Wavelet Transform to Time Series Information

To solve the problems of poor performance of traditional spectrum sensing method under low signal-to-noise ratio, a new spectrum sensing method based on Empirical Mode Decomposition algorithm and K-means clustering algorithm is proposed. Firstly, the Empirical Mode Decomposition algorithm and the wavelet threshold algorithm are used to remove ...

Standard verification methods "Eyeball" verification. One of the oldest and best verification methods is the good old fashioned visual, or "eyeball", method: look at the forecast and observations side by side and use human judgment to discern the forecast errors.

Forecast Verification -- Issues, Methods and FAQ - CAWCR

Introduction This web site: Describes methods for forecast verification, including their characteristics, pros and cons. The methods range from simple traditional statistics and scores, to methods for more detailed diagnostic and scientific verification.
