### **Nonvolatile Memory Technologies With Emphasis On Flash: A**

Nonvolatile memory technologies in Si-based electronics date back to the 1990s. Ferroelectric field-effect transistor (FeFET) was one of the most promising devices replacing the conventional Flash memory facing physical scaling limitations at those times.

### **Overview of emerging nonvolatile memory technologies**

The memory and storage system, including processor caches, main memory, and storage, is an important component of various computer systems. The memory hierarchy is becoming a fundamental ...

parameters that are common to a wide range of non-volatile memory technologies. Common NVM Test Parameters Pulse amplitude is the required pulse height used to program and erase the memory cell. Floating gate memory can require 15–20V, or even greater, during the write pulse. Most NVM candidates require 3–5V. The goal for replacement NVM technologies is lower pulse amplitudes, but early ...
